20,000+ Best Fonts Download Stephen Type is a realistic handwriting and signature font. Please see all of the additional pictures to see how it looks and view the glyphs (includes some Latin glyphs). It can be used for a wide range of projects, such as logo designs, online signatures, email signatures, party & wedding invitations, t-shirt designs, signs, magazine design, greetings cards, poster design and much more! This font is free for PERSONAL USE. Link to purchase full version and commercial license : HERE Stephen Type Handwritten Font License: Free for Personal Use! Font Type: OTF Format: .Zip Total Files: 1 With over 5 million downloads to date, FontCreator is considered the world's most popular and best font editor. Create and edit (variable) OpenType and web fonts. An advanced feature set makes it the tool of choice for professionals, and its intuitive interface is straightforward enough for users at any expertise level. When you create or open a font, FontCreator displays an overview of all available characters. You can simply add missing characters, or select an existing character, and modify its appearance. You can import (scanned) images of your signature or company logo, or make a font from your own handwriting. With FontCreator you can also fix character code-points, font names, glyph names, and kerning pairs. At any time, you can preview your typefaces before installation. You can even make variable fonts by defining axes and outline layers. OpenType features are preserved on opening a font, and you can use the OpenType Designer to visual edit the features and lookups. The OpenType proofing tool allows you to quickly track down and correct text layout issues. This professional font editor supports both quadratic- and cubic-based contours and has several smart features to ensure smooth connections where you need them. The validation features help you locate and fix possible outline issues. FontCreator is a true native font editor, so there is no need to buy or install third-party tools or extensions. FontCreator is a versatile font editor that allows you to make scalable color fonts, supporting both COLR and SVG color extensions. This allows you to create multi-colored glyphs for systems that support it, while maintaining backwards compatibility for systems that do not. Watch the video for a quick introduction on how to create color fonts with FontCreator, read our online tutorial about making OpenType color fonts, and take a look at this colour font demo page. Something went wrong. Wait a moment and try again. Neo-grotesque sans-serif typeface family developed by Google This article is about the typeface. For the Masters of the Universe character, see Roboto (character). Not to be confused with Mister Roboto. Typeface RobotoCategorySans-serifClassificationNeo-grotesqueDesigner(s)Christian RobertsonCommissioned byGoogleFoundryGoogleDate created2011Date released2011LicenseApache LicenseSampleLatest release versionv2.138Latest release dateAugust 3, 2017Metrically compatible withCrique Grotesk[1] Roboto (/roʊˈbɒt.oʊ/) [2] is a neo-grotesque sans-serif typeface family developed by Google as the system font for its mobile operating system Android, and released in 2011 for Android 4.0 "Ice Cream Sandwich".[3] The entire font family has been licensed under the Apache license.[4] In 2014, Roboto was redesigned for Android 5.0 "Lollipop". Usage Roboto is the default font on Android, and since 2013, other Google services such as Google Play, YouTube, Google Maps,[5] and Google Images. In 2017, Roboto was used on the LCD countdown clocks of the New York City Subway's B Division lines. Roboto Bold is the default font in Unreal Engine 4, and in Kodi.[6] Roboto Condensed is used to display information on European versions of Nintendo Switch packaging, including physical releases of games. Utsav Network uses Roboto for its wordmark.[7] History Development The font was designed entirely in-house by Christian Robertson who previously had released an expanded Ubuntu Tinting font through his personal type foundry Betatype.[8][9] The font was officially made available for free download on January 12, 2012, on the newly launched Android Design website. Compared to Android's previous system font, the humanist sans-serif Droid, Roboto belongs to the neo-grotesque genre of sans-serif typefaces. It includes Thin, Light, Regular, Medium, Bold and Black weights with matching oblique styles rather than true italics. It also includes condensed styles in Light, Regular and Bold, also with matching oblique designs. Redesign In 2014, Matias Duarte announced at Google I/O that Roboto was significantly redesigned for Android 5.0 "Lollipop".[8][10] Punctuation marks and the titles in the lowercase "i" and "j" were changed from square to rounded, the bottom surface of the top part of the number "1" points downwards instead of horizontal, the tail part of the numbers "6" and "9" have been slightly shortened (in resemblance to "Trebuchet MS"), and the entire typeface was made "slightly wider and rounder" with many changes in details.[8][10] Android 5.1.1 on a Google Nexus 7, featuring the redesigned Roboto font. Sample text of Roboto in 2013 in various font weights and sizes, prior to the redesign for Android 5. Unlike now, the leg of the R has a curl, the same as in Helvetica. Language support Roboto supports Latin, Greek (partial) and Cyrillic scripts.[11] On Android, the Noto font is used for languages not supported by Roboto, including Chinese (simplified and traditional), Japanese, Korean, Thai and Hindi.[12] Variations Roboto Slab Typeface Roboto SlabCategorySerifClassificationSlab serifDesigner(s)Christian RobertsonCommissioned byGoogleDate releasedMarch 2013Latest release version1.00263 Roboto Slab is a slab serif font based on Roboto. It was introduced in March 2013, as the default font in Google's note-taking service Google Keep.[13] (The font was changed to the sans-serif Roboto in 2018.)[14] It is available in four weights: thin, light, regular and bold. However, no oblique versions were released for it. In November 2019, the typeface was updated and added 5 new weights: Extra-Light, Medium, Semi-Bold, Extra-Bold and Black, and a variable font axis ranging from 100 to 900. It also was modified with some characteristics from the sans-serif Roboto and to slightly resemble most slab-serif typefaces, such as "R", "K", "k", "g", "C", "S", etc. Roboto Mono Typeface Roboto MonoCategorySans-serifClassificationMonospacedDesigner(s)Christian RobertsonCommissioned byGoogleDate released2015Sample Roboto Mono is a monospace font based on Roboto. It is available in seven weights: thin, extra-light, light, regular, medium, semi-bold and bold, with oblique stylings for each weight.[15] Heebo Heebo is an extension of Roboto that includes Hebrew characters.[16] Roboto Serif Roboto Serif is a version of Roboto with serifs. It was debuted in 2022 to fill the serif niche.[17] Reception This article needs to be updated. The reason given is: Lacking reviews regarding typeface after Android 5.0 redesign. Please help update this section to reflect recent events or newly available information. (September 2020) Google developed the font to be "modern, yet approachable" and "emotional." [18][19] but Roboto received mixed reviews on its release. Joshua Topolsky, Editor-In-Chief of technology news and media network The Verge, describes the font as "clean and modern, but not overly futuristic - not a science fiction font".[20] However, typography commentator Stephen Coles of Typographica called the initial release of Roboto "a Four-headed Frankentfont", describing it as a "hodgepodge" of different typographic styles which do not work well together.[8] Other type design professionals called out obvious errors in accented glyphs, while John Gruber called the font a "Helvetica ripoff".[21][22] See also IBM Plex Noto Segoe Product Sans San Francisco References ^ "Crique Grotesk typeface".
